Picky's Assignment:

1. Please use the following Reddit configuration:

```
REDDIT_API_URL: https://oauth.reddit.com
ACCESS_TOKEN: <generate_using_reddit_oauth_api>
REDDIT_HOT_POSTS_URL: https://oauth.reddit.com/hot
```

> Refs: https://www.reddit.com/dev/api/#GET_hot

2. Launch a Backend API that does the following:

- Generates a Reddit access token.
- Retrieves Reddit hot posts.

> Please consider the usage of Docker. You may use any programming language you find suitable.

3. Launch a Frontend (SPA or SSR) that does the following:

- Shows Reddit's hot posts listing, with unlimited "Show More" posts.
- Shows Post title, created_at, summary, thumbnail, comment_count, and upvote_count.
- Users may bookmark a post, it shows bookmarked post listing.

> Please consider the usage of any Web Storage technologies for bookmarked posts. you may use any framework you find suitable.

Deadline: Friday 19, 2022 (12:00 P.M. EST)

When you're done, do one of the following:

- Upload to a private repository and add me, amoallim15 (Github), as a contributor so I can review your solution.
- Upload to a public repository and name it "Reddit side project", then share the URL with me.
- Zip the directory, minus the FE node_modules folder, and reply to this email with the compressed file as an attachment.
